# COLOUR

## Recommended Uses

The colours selected are water based pigment dispersions, they are all concentrated products which mix well with other products, especially selected for seed treatment & coating.

## Features & Benefits

- Good opacity, providing excellence coverage over seed
- Compatible with all Flare & Blaze polymers
- Range of colours available

The colours are NPE Free and are among the highest quality in the marketplace.

| Use              | Colouring               | Coating Type |
|------------------|-------------------------|--------------|
| Film             | Yes                     |              |
| Encrust          | Yes                     |              |
| Pellet           | Yes                     |              |
| Binding Capacity | ----                    | Properties   |
| Opacity          | High                    |              |
| Finish           | Matt                    |              |
| Flow Rating      | --                      |              |
| Dust Control     | --                      |              |
