Easy CRUST

Recommended Uses

Easy CRUST is a blend that can be used for encrustment and weight increase of smaller seeds such as for Leguminosae seed. When used in combination with Stix 1 or Stix 3 the best results are obtained. Colour can be added in the final phase of encrustment to give a superior quality look to the seed.

Easy CRUST is also able to use in very low dosages (10%) with horticultural crops for colour enhancement or improved flowability.

Easy CRUST is very suited to use as drying powder. Used in good measured amounts the product will be dust-free after treatment.

Features & Benefits

Easy CRUST is a white powder resulting in a very nice bright white finish. It allows for a very quick buildup of the seed and has superior qualities in dividing in a seed lot during coating

- Easy to use an encrusting blend
- Easy in seed application
- Smooths irregular shaped seed
- Weight increase
- The improved colour at low dosages on dark seeds
- Improved flowability
- Improves drying of coated seed

When used responsibly the seed treatment equipment is easy to clean after application.

Use	Coating and finishing
Film	No
Encrust	Yes
Pellet	Yes
Binding Capacity	Low
Opacity	High
Finish	Smooth
Flow Rating	Good
Dust Control	--
Colour(s)	White

Application Guide

Easy CRUST blend should be applied to wet seed, after which increased gradually while spraying a binder or coating mixture. For encrustment the product must be applied using Stix 1 or Stix 3 to allow for adherence and increase coating strenght. The amount used will depend on the seed type and amount of weight increase, as well as the strenght characteristics required.
